
Observed data: pooled estimates, and how many draws are actual estimates (grey band = grid range)
grid L [0.3, 1.3, 2.3], observed, truth mu = 0.4
grid H [1.0, 2.0, 3.0], observed, truth mu = 2.5
recovered mu (pooled, +/- sd)
truth
floor 0.347
floor 2.556
truth
fraction of draws
16-member per-draw not kept cal 88%
16-member per-draw not kept cal 38%
EveNet linear
EveNet tiny
EveNet small
EveNet full
MLP K=1
MLP K=8
interior, calibrated
interior, calibration refused
vertex inside grid, calibration clamps it to an edge
vertex outside grid (np.clip)
no vertex (concave)
at edge, cause not kept
